

# Update: The GEO Standards and Interoperability Forum (SIF)

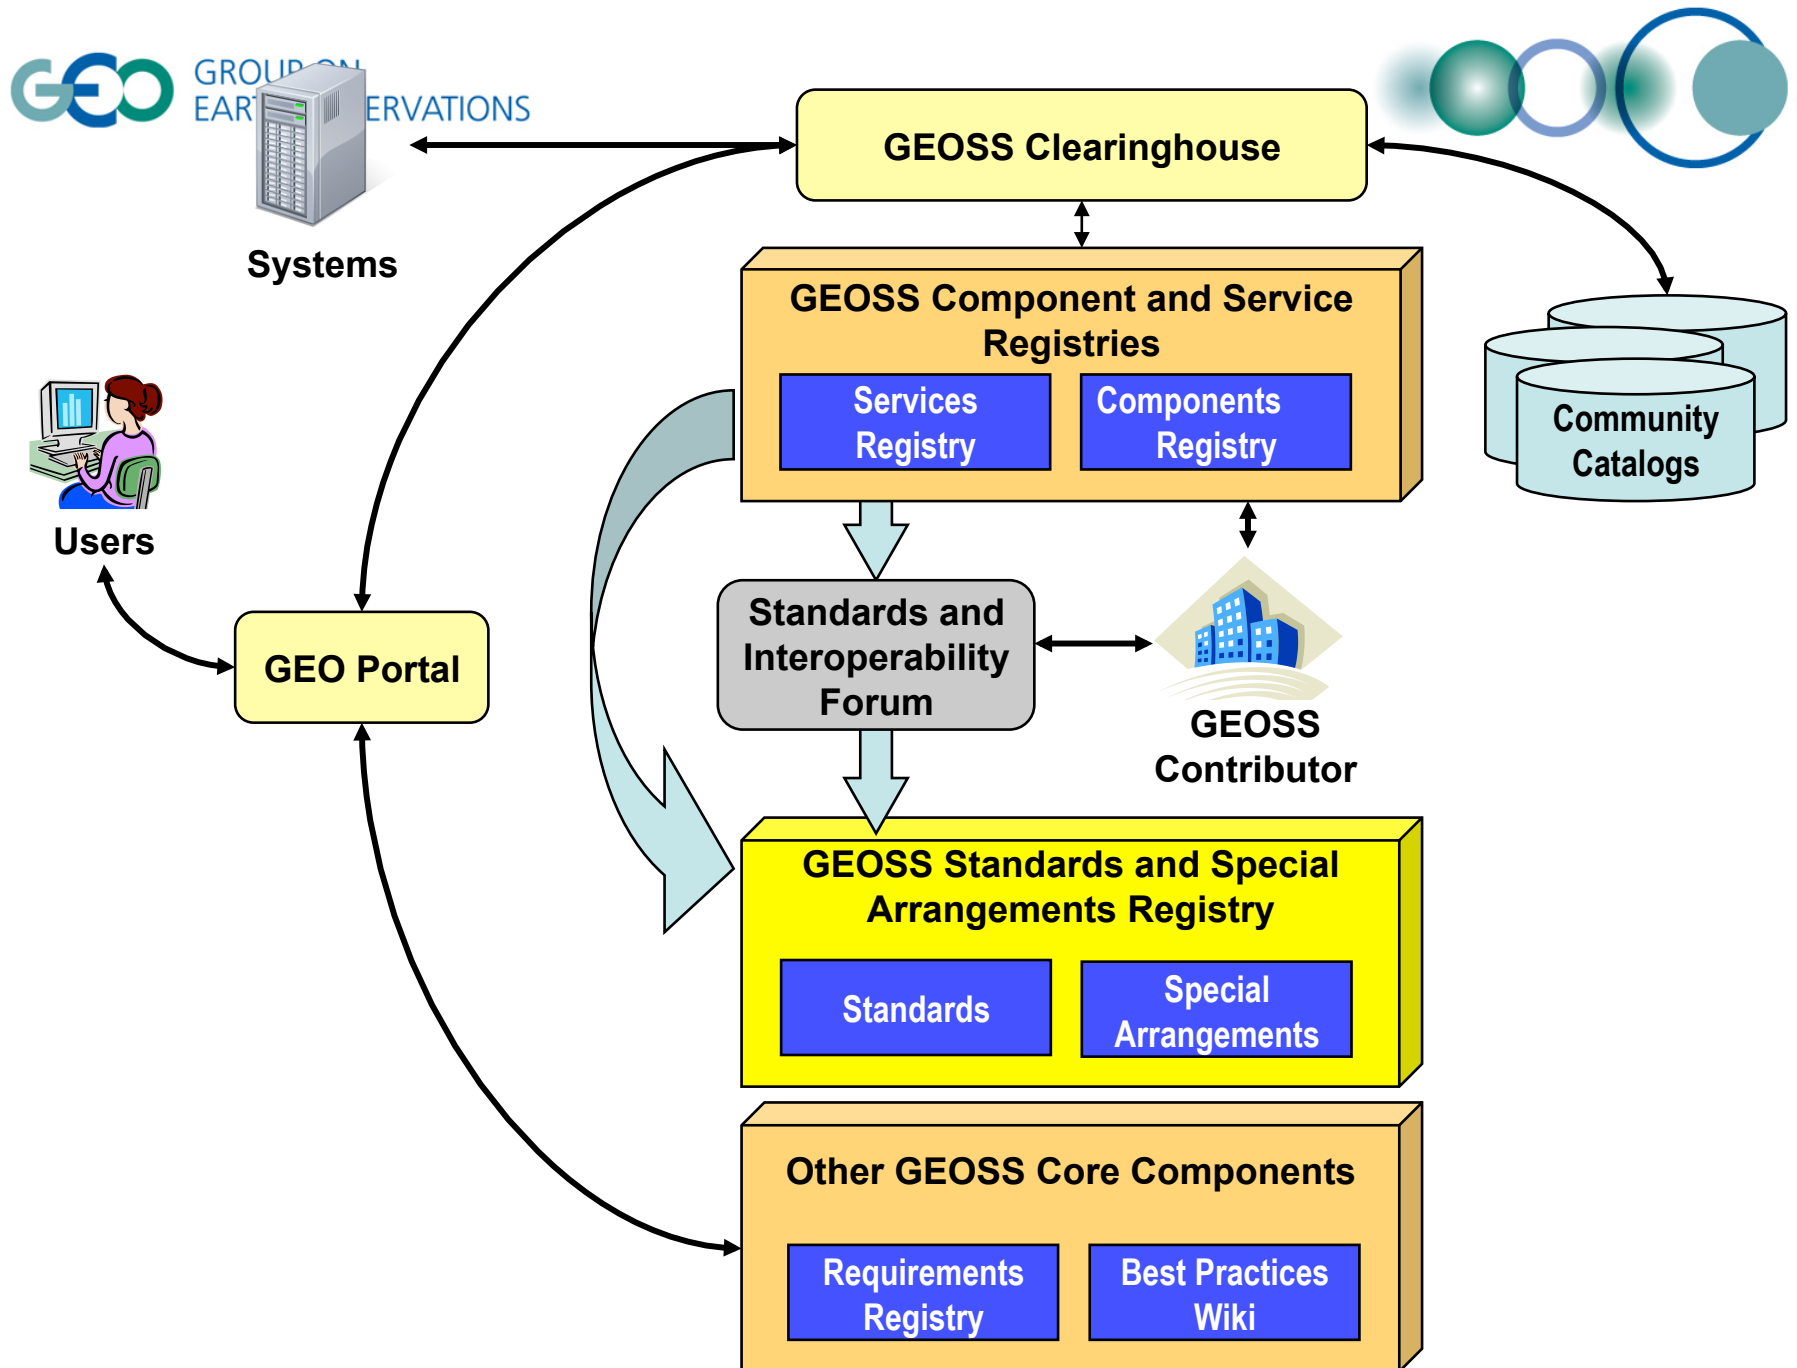

SiriJodha S. Khalsa, *Chair GEO ADC SIF*  
National Snow and Ice Data Center  
Boulder, CO

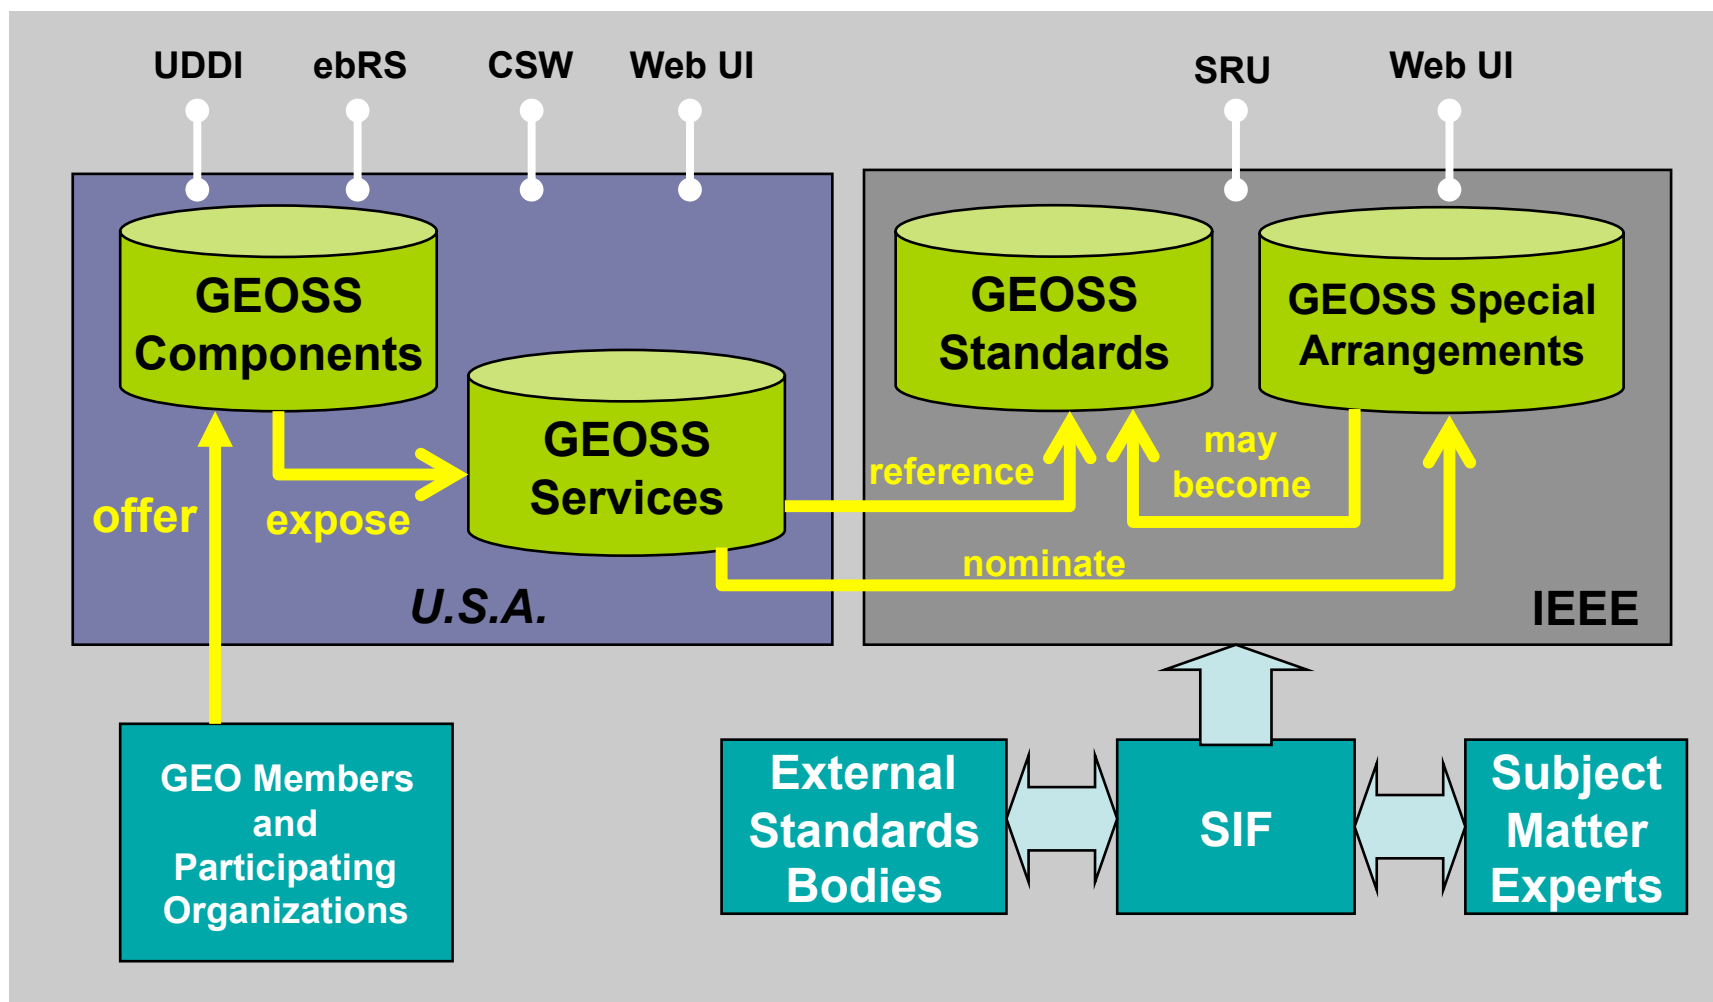

## **GEO Components, Services and Standards**

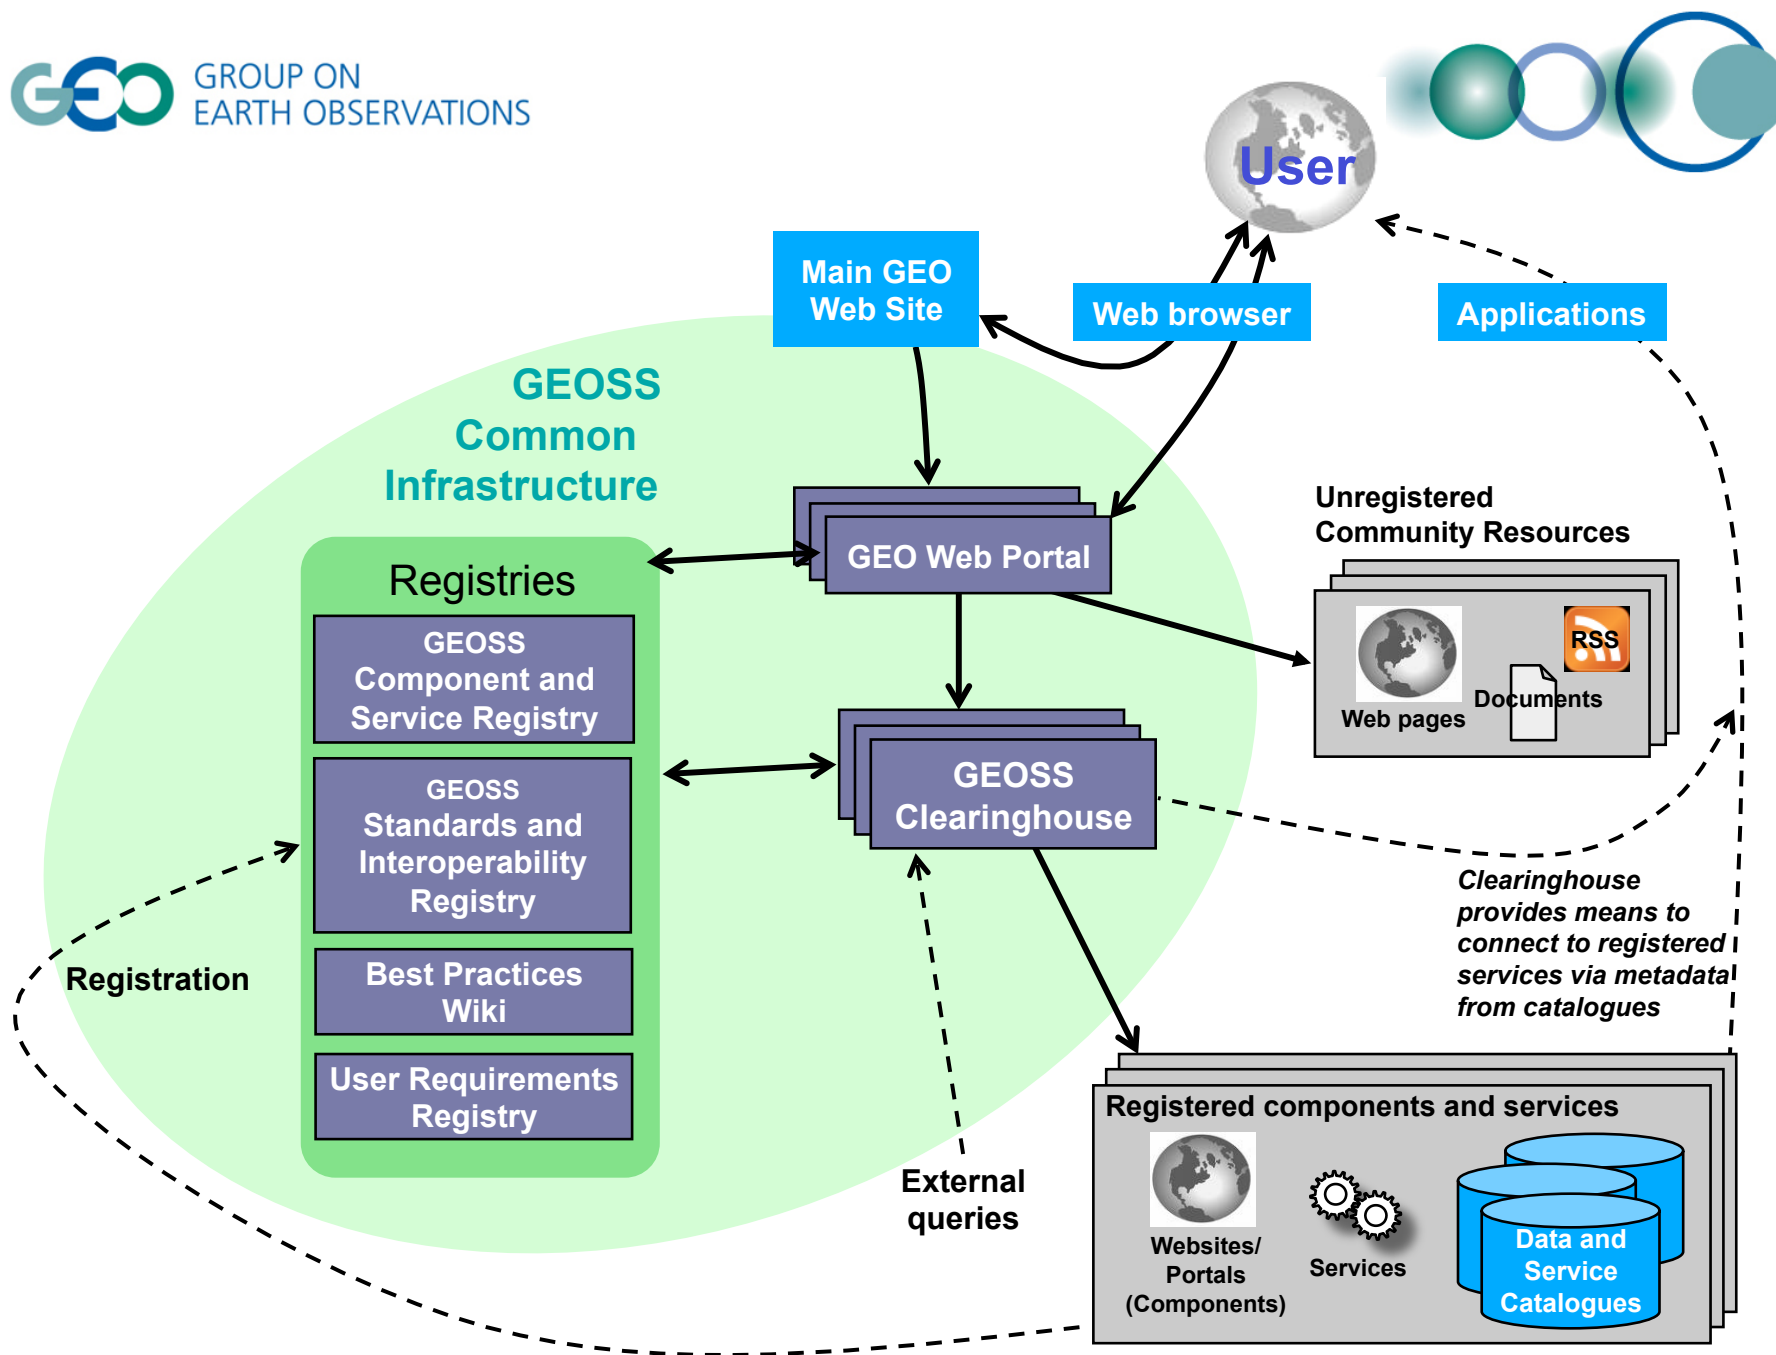

- Any GEO Member or Participating Organization may contribute components to GEOSS
  - This is done by registering those components in the GEOSS Components Registry
  - All components are welcome
- If the component exposes services, these are registered in the GEOSS Service Registry
  - When registering services the provider may designate standards employed by that service
  - The list of standards is maintained in the Standards Registry
  - If the “interoperability arrangement” employed by the service is not in the pick-lists, the provider may register a candidate “Special Arrangement”

## GEOSS Registries

## Process

- How do Standards and Special Arrangements get into the Standards Registry?
  - Prepopulated by SIF
    - Done prior to deployment of Service Registry
    - Included common OGC and ISO/TC211 stds
  - Proposed via Service Registry
    - Associated with a component
  - Proposed at Standards Registry Site
    - User registration required

## Issues

- Original concept: interoperability in GEOSS would develop organically as links between systems were established on an as-needed basis
  - Not all GEOSS components would connect to a common network
  - Capture successful interoperability implementations in Best Practices Registry?
- Bounded set of GEO standards to advance interoperability?
  - Promotion of particular standards considered inconsistent with the nature of GEO
  - SIF must exercise a “light touch” as registry gatekeeper
  - How to foster convergence?
  - ToR says SIF can recommend particular standards
  - Issue will be discussed in the next ADC co-Chairs meeting

## SIF Regional Teams

- The SIF “Regional Teams” are still being formulated
  - EC funded initiative, GIGAS, to coordinate efforts of INSPIRE, GMES and GEOSS
  - Teams identified for N. America, Japan, China, S. America
  - Indian regional team being worked
  - Suggested that African participants team-up with the European team for the moment, and once their membership gets going, split off at that time.
- Subject matter expert database being developed

## Participation

- Currently SIF meeting every other week via telecon
- First face-to-face meeting of RT leads in Bucharest

**Thanks!**
